TOGETHER IN LEARNING

Toise High School is situated around a large central courtyard. The courtyard was unpaved and learners would track dirt, mud, and debris into the classrooms on a regular basis. This was especially problematic in the computer labs. The area was almost impassable when it rained. We paved the courtyard and installed essential drainage ditches and drains in order to keep the area clear of mud and water.

The courtyard improves the appearance of the entire school and is a true point of pride for the administration and learners. The 650+ learners and teachers and the school infrastructure is impacted daily by the beautification of the courtyard and its improved functionality.
